

We're looking for new colleagues!

Job Description

We're a group of agile software developers from ALU Wireless department developing Java desktop applications. Network architects and radio designers all around the world are using our tools to design mobile networks. These tools feature sophisticated GUIs and powerful telecom utilities.

Responsibilities

- analyze specifications and the acceptance tests
- maintain automated GUI tests implemented using FEST
- implement new test cases based on the acceptance tests

Technical Requirements

- must be a student at a faculty of informatics, computer science or telecommunications (last year is excluded)
- medium knowledge of object oriented concepts
- medium knowledge of the Java programming language
- basic knowledge of Swing
- some experience working with an IDE (preferably Eclipse)
- experience with Apache Ant, JUnit, TestNG, SVN or FEST constitutes an advantage

Nontechnical Requirements

- team player
- strong ability for information analysis and synthesis
- flexibility towards experimenting with new working modes and technologies
- willingness to innovate
- medium to advanced English knowledge
