1	Introduction	1
1.1	Motivation	1
1.2	Modern computers	2
1.3	Algorithm-architecture dependence	4
1.4	Parallel algorithm design	4
1.5	Parallel algorithm in numerical analysis	6
2	Linear systems	9
2.1	Parallel Gaussian elimination	9
2.1.1	Parallelization of the serial method	9
2.1.2	Elimination schemes	10
2.1.3	Symmetric matrix	10
2.2	Parallel Gauss-Jordan method	11
2.2.1	Motivation	11
2.2.2	Method description	12
2.3	Parallel LU Decomposition	12
2.3.1	Parallel block LU decomposition with wrap around map	13
2.3.2	Alternative multirow pivoting	15
2.3.3	Divide and conquer strategy	16
2.3.4	LDU decomposition on vector computers	17
2.4	Parallel QR factorization	18
2.4.1	Sequential Givens rotations	19
2.4.2	Parallel Givens rotations	20
2.4.3	Sequential Householder reflections	23
2.4.4	Parallel Householder reflections	25
2.5	WZ factorization	26
2.6	Parallel conjugate gradient method	28
2.6.1	Sequential conjugate gradient method	28
2.6.2	Preconditioner conjugate gradient method (PCG)	30
2.6.3	Parallel implementation: level scheduling	33
2.6.4	Parallel search	34
2.7	Relaxation methods	37
2.7.1	Sequential methods	37
2.7.2	Chaotic relaxation scheme	40

2.7.3	Asynchronous parallel relaxation	41
2.8	Triangular systems	43
2.8.1	Linear recurrence system	43
2.8.2	Column-sweep algorithm	43
2.8.3	Recurent-product algorithm	44
2.8.4	Partitioning technique	46
2.8.5	Quasi-systolic solution	46
2.8.6	Triangular Sylvester equation	47
2.8.7	Downdating the Clolesky factorization	49
2.9	Tridiagonal systems	51
2.9.1	Vectorizable LU decomposition	51
2.9.2	Recursive doubling in LU decomposition	52
2.9.3	Odd-even reduction or cyclic reduction	52
2.9.4	Divide and Conquer methods	54
2.9.5	Iterative tridiagonal solvers	56
2.10	Banded systems	58
2.10.1	Eliminations methods	58
2.10.2	Incomplete block LU decomposition	60
2.10.3	Banded triangular matrix	61
2.11	Sparse linear systems	62
2.11.1	Blocking a sparse matrix	63
2.11.2	Elimination tree on parallel Cholesky factorization	63
2.12	Singular value decomposition	66
2.12.1	Parallel Jacobi rotations	67
2.12.2	Generalized singular value decomposition	68
2.12.3	Divide and conquer strategy	69
3	Eigenproblem	73
3.1	The symmetric eigenvalue problem	73
3.2	Plane rotation method	73
3.3	Cyclic schemes	74
3.4	Simultaneous application of rotations	75
3.4.1	Parallel Jacobi method	75
3.4.2	Sameh's scheme	76
3.5	Mobile schemes	76
3.6	Reduced cyclic schemes	78
3.7	Householder method	79
3.8	Bisection method	81
3.9	The power method	82
3.10	Sameh's parallel eigenvalue algorithm	83
3.11	Block Recursive algorithm	85
3.12	Generalized eigenvalue problem	88

4	Nonlinear systems	93
4.1	Multiplexing of Lagrange extrapolation	93
4.2	Multiplexing of Hermite interpolation	95
4.3	Reducing the problem to a linear system	95
4.4	Polynomial equations	95
5	Optimization	97
5.1	Univariate search	97
5.1.1	Search for a maximum of unimodal functions	97
5.1.2	Parallel minimax search for a maximum	97
5.2	Unconstrained multidimensional minimization	101
5.2.1	Powell's algorithm	101
5.2.2	A Powell type parallel algorithm	102
6	Differential equations	103
6.1	General consideration	103
6.2	Gear's categories of parallel algorithms	105
6.2.1	Parallelism across the system	105
6.2.2	Parallelism across the method	109
6.3	Tomas-Ueberhuber hierarchy of parallelism	112
6.3.1	Parallelization of serial programs	112
6.3.2	Parallelization of serial algorithms	113
6.3.3	Modification of serial algorithms	113
6.3.4	Decomposition of the problem	114
6.4	Nivergelt's method	114
6.5	Parallel predictor-corrector methods	115
6.5.1	Front method	115
6.5.2	Concurrent corrections	119
6.5.3	Parallel implementation	121
6.6	Parallel block methods	121
6.6.1	Worland's methods	122
6.6.2	Block predictor-corector methods	123
6.7	Runge-Kutta methods	125
6.7.1	Digraph method	125
6.7.2	Data flow method	130
6.7.3	Decomposition method	131
6.8	Extrapolation methods	132
6.9	Boundary value problem	134
6.9.1	Parallel shooting	134
6.9.2	QR factorization	135
6.10	Iterated Defect Correction	139
6.11	Waveform relaxation methods	141
6.12	Multirate methods	142
6.13	Parallel algorithms for stiff ODEs	143
6.13.1	Parallelization of an extrapolation method	143
6.13.2	Parallel algorithm for a special kind of stiff systems	146

7	Partial differential equation	151
7.1	Finite-difference approximation	151
7.1.1	Discretized problem	151
7.1.2	Point Jacobi method	153
7.1.3	Gauss-Seidel method	155
7.1.4	Grid point ordering	157
7.1.5	Sparse grids	162
7.1.6	Sucsesive overrelaxation method	163
7.1.7	Line relaxation methods	164
7.1.8	Block iterative schemes	167
7.1.9	Alternating direction implicit methods	171
7.1.10	Semi-iterative methods	171
7.1.11	Domain-decomposed relaxation	172
7.1.12	Parallel implementations	172
7.1.13	Variable coefficients	174
7.1.14	Three-Dimensional Problem	174
7.2	Parallel conjugate gradient method	175
7.3	Fast Poisson solvers	182
7.4	Reduction of partial diferential equations reduced to ordinary differential equations	186
7.5	Multigrid methods	186
7.5.1	Two-Grid method for one-dimensional Poisson problem	187
7.5.2	Multi-grid method for one-dimensional Poisson problem	190
7.5.3	Two-grid method for two-dimensional Poisson problem	190
7.5.4	Multi-grid method for two-dimensional Poisson problem	192
7.5.5	Parallel implementations	193
7.6	Finite element method	195
7.6.1	Polynomial approximation	195
7.6.2	Parrallel method	197
7.6.3	Additive Schwarz method	199
7.6.4	Orthogonal functions method	205
7.7	Domain Decomposition	206
7.7.1	Substructuring the composite domains. Capacity matrix method	208
7.7.2	Divide and conquer applied to regular domains. Schwarz's method	211
7.7.3	Coarse grid acceleration of Schwarz' method	213
7.7.4	Preconditioners	216
7.7.5	Parallel implementations	221
7.8	Monte Carlo solution of PDE	224
7.9	Parabolic equations	226
7.9.1	Finite difference	226
7.9.2	Waveform methods	226
7.9.3	Multigrid method for parabolic PDE	229
7.10	Hyperbolic equations	231
7.11	Particle Methods	232

8	Reccurence relations, matrix operations, integration and FFT	237
8.1	Recursive doubling	237
8.1.1	Full Recursive Doubling	237
8.1.2	Linear and nonlinear reccurence	238
8.1.3	Cyclic-odd-even reduction	240
8.1.4	Linear reccurence system	240
8.2	Matrix multiplication	243
8.3	Numerical integration	244
8.4	Parallel FFT	245
8.4.1	Fourier Series	245
8.4.2	The discrete Fourier transform	245
8.4.3	Inverse transform	246
8.4.4	Multivariate Fourier transform	249
8.4.5	Multicomputer implementation	250
8.4.6	Cooley-Tukey algorithm	250
9	Parallel computation - glossary	255
